Jiarui Fang (方佳瑞)

+(86) 13717819702 fangjiarui123@gmail.com
No. 11 of Chuangyedajie, Haidian Beijing, China
Update Date: April 22, 2022

Work Experience

- **HPC-AI TECH** Beijing, China
  Co-founder, CTO *February 2022 - Now*
- **WeChat, Tencent** Beijing, China
  Senior Software Engineer (T11) *at WeChat AI* *July 2019 - February 2022*
  Mentor : Dr. Jie Zhou
- **National Supercomputing Center in Wuxi** Wuxi, Jiangsu, China
  Ph.D Research Intern *at R&D Center* *August 2017 - May 2019*
  Mentor : Prof. Haohuan Fu

Education

- **Tsinghua University** Beijing, China
  Ph.D. *in Department of Computer Science & Technology* *July 2019*
  Advisor : Prof. Guangwen Yang, Co-advisor: Prof. Haohuan Fu
- **University of California, Davis** Davis, CA, USA
  Visiting Scholar *in Department of Computer Science Engineering* *August 2017 - August 2018*
  Advisor : Assistant Prof. Cho-Jui Hsieh [link]
- **Beijing University of Posts and Telecommunications** Beijing, China
  B.S. *in Department of Computer Science & Technology* *June 2014*
  Ranking 6^{th} **top 2%** among 300 students (Honored 2014 Outstanding Graduate of Beijing)

Project Highlights

- **Building Large-scale Deep Learning Framework for Big Model Area**
  HPC-AI Tech *February 2019 - Now*

  I manage the tech team on building Colossal-AI [link], which is a Unified Deep Learning System for Large-Scale Parallel Training.

- **Building Open-sourced Deep Learning Infrastructures**
  Wechat AI, Tencent *July 2019 - February 2022*

  I initialized and developed TurboTransformers [link], a fast runtime for transformer inference on CPU and GPU, and PatrickStar[link], Parallel Training of Large Language Models via a Chunk-based Memory Management. Both software is open-sourced on Tencent's official Github. Media reports on my works [link1], [link2]. I was awarded as the Excellent Contributor for Open-sourced Collaboration of 2021 by Tencent.

- **Building Deep Basic Modules for WeChat App**
  Wechat AI, Tencent *July 2019 - March 2021*

  I contributed to a set of basic modules in the WeChat App, including The WeChat Input Engine, the WeChat Open Dialogue Platform, and the WeChat Translation System. WeChat is a super App with over 1 Billion active users per month.

- **Large-scale Deep Learning Training (DL) System for GPU Supercomputer**
  University of California, Davis *September 2017 - August 2018*

  Designed the RedSync – a distributed data-parallel Deep Learning training system using gradient pruning and quantization. When scaled up to 128 GPUs, the RedSync brought significant performance improvements to DNNs previously considered hard to scale.

- **High Performance Deep Learning System for the Sunway TaihuLight**
  National Supercomputing Center in Wuxi *April 2016 - August 2019*

  Built a deep learning framework from zero on the Sunway TaihuLight, which is based on the innovative SW26010 many-core processors and ranked **No.1 on the 47th-50th Top500 Supercomputer lists.**

  1. Designed the swGEMM – a GEneral Matrix Multiplication (GEMM) library based on SW26010. Core code handwritten by assembly, reaching 97% of peak performance. Significant speedups (2-10x) were achieved by applying swGEMM instead of default BLAS to deep learning applications.
  2. Designed the swDNN – a library provides APIs for mainstream DL operator (CONV, LSTM, FC, BN and activations). Regarding the most complicated CONV ops, three parallel schemes were designed for the special SW26010 many-core architecture, i.e. explicit GEMM, implicit GEMM, and Winograd. The computing efficiency of swDNN exceeded cuDNNv7.5 running on Tesla K40.
  3. Designed the swATOP – an end-to-end automated framework that optimizes complex parallel DL operator code on SW26010. By reading several lines of DSL statements, swATOP can automatically generate code that exceeds manual optimization performance.
  4. Designed the swCaffe – an MPI-based deep learning framework on the Sunway TaihuLight. Synchronization employed an innovative topology-aware MPI Allreduce method which is 10x faster than the default MPI_Allreduce on 1024 nodes.

- **High Performance Scientific Computing Applications**
  Department of Earth System Science, Tsinghua University *February 2014 - March 2016*

  1. Proposed a generalized cache-friendly design based on NVIDIA GPUs and Intel Xeon Phis for complex spatially-variable coefficient (CSVC) stencils. Gained 4x speedup in the seismic imaging software (GeoEast-Lightning) used by China National Petroleum Corporation.
  2. Accelerated a serial of scientific applications on different HPC platforms, including: transient electromagnetic simulation on CPU cluster; remote sensing data analysis with SVM on Intel Xeon Phi; Community Earth System Model (CESM) and crop modeling on Sunway TaihuLight.

Skills

- **Good at English:** GRE 322 (Verbal 153, October 2012)
- **Programing Language:** C/C++, CUDA, Python
- **Technical Skills:** Computer Architecture, Parallel Computing, Software Performance Tuning and Optimization, Deep Learning, Numerical Computing.
